# MASTER TREND

FOREX TRADING SYSTEM

# Master Trend EA instructions (BETA version, Use at your own risk)

---

The following are instructions for using MasterTrend EA (Expert Advisor) with MasterTrend trading system

## NOTES:

- MasterTrend EA can only be used with MasterTrend trading system
- You also must be an active MasterTrend purchased or monthly member in order for this EA to work.
- It is NOT recommended to use the EA without supervision (i.e fully automatic). Trader must monitor the trades opened by this EA, and should manually control and close the trades as needed.
- We recommend that you start using this EA after you spend a few weeks of using MasterTrend manually on live trades; this way you understand how the system works first.
- We also recommend that you use it on a demo account for a few weeks until you feel comfortable trading with the EA. This training period will help you to select the best pairs and best time frames that suite your trading style.
- You must set the EA parameters prior to use. Ksignals.com does not provide presets for EA trading.
- Insert MasterTrend in the chart prior to inserting this EA.

## EA Parameters:

### 1- Trades control:

- **Allow multiple orders**; if false, you can only open one trade per chart at a time, all other signals will be ignored if there is an open trade.
- **Start hour**, EA can only open trades after this time
- **End hour**, EA can only open trades before this time
- **Stop loss**, assign stop loss in pips
- **Second chance entry**, allows EA to take one second change trade for each signal.
- **Near**, in pips; take second chance trade when price is near blue or red dots by "Near" amount.
- **Close opposite order**, will close buy if a sell trade is opened and vice versa. This will only work if a trade is opened, not when an opposite signal is generated by MasterTrend. For example, if MT generates a signal that does not meet the criteria of this EA, it will not close the opposite order.

- **Lot**, standard lot size or as assigned by Broker
- **Magic Number**, assign a number for each pair
- **First Target**, in pips, to be used only if ClosePartialatFirst TP is used
- **Second Target**, in pips, can be used as TP
- **ClosePartialatFirst TP**, if = 1 EA will close 50% of trade size at First Target
- **Lock pip enabled**, if =1, EA will move SL to “Lock pips” value when “Lock pips at Threshold” is reached
- **Lock pips at Threshold**, in pips
- **Lock pips**, in pips (above or below Order open price ), to be used to secure trade.
- **Trailing Stops enabled**, Standard trailing stops by MT4
- **Trailing stops pips**, in pips

## 2- Signal filtering

### Using moving average

- **MA1\_Period**, Moving average period ( example MA=200)
- **MA1\_Method** 0 for SMA , 1 for EMA, 2 for SMMA, 3 for LWMA
- **MA1\_APrice**, 0 for close, 1 for open
- **MA1\_Shift**
- **UseCandleOverEMAToEntry**, 0 for Off, 1 for On, when On trade will open only when above ( for buy) or below ( for sell ) MA
- **UseCandleOverEMAToExit** 0 for Off, 1 for On, when On trade will close when blow ( for buy) or below( for sell ) MA

### Using Pivot Orange line and levels

- **UseOrangeLineToEntry** if true, we are going to Buy just if the current Price is < than Orange Line or opposite for Sell
- 
- **UseGrey1LineToEntry**, if true, we are going to Buy just if the current Price is < than Grey1Line Line or opposite for Sell

- **UseGrey2LineToEntry, if true**, we are going to Buy just if the current Price is < than Grey2Line Line or opposite for Sell

## Master Trend Stop Dots

- **UseKsmStopToEntry** If true, EA will only enter trade if there is a matching dot and will use MaxDotsDistance value
- **UseKsmStopToExit** If true , the EA will move SL above or below each new dot and will use SLDistanceFromDots
- **MaxDotsDistance**, pips, if = 0 , it will be deactivated . if= pips value, EA will only open trade if entry price is within this pips value from the dots
- **SLDistanceFromDots**, pips, EA will Place SL at pips value below/above the dots and trail it behind dots

## 3- MasterTrend Arrow to Exit

- **UseMasterTrendToExit**, 0/ 1; if 1, it will close trade if a new arrow appears regardless of signal filtering and regardless if there is an opposite trade open.
